

Cookie policy

Superintelligent Group AB · company reg. no. 559213-4836 · Effective from 29 October 2026

In short: we set no cookies

The website, The Superintelligent Game and the AI debt calculator set no cookies. We use no analytics tools, tracking pixels or advertising networks. The only thing we store in your browser is your choice of language, see below.

Your choice of language

The website is available in Swedish and English. When you choose a language yourself with the language button, or close the suggestion to read in English, that choice is saved in your browser's local storage (localStorage) so that the website remembers it next time. All that is saved is the language, for example "en", or the fact that you closed the suggestion. It is never sent to us or anyone else, and you can delete it at any time by clearing the site data in your browser.

To decide whether to show the suggestion to read in English, the website also reads which language your browser is set to. This happens in the browser and is not saved.

The storage is necessary for a function you have asked for yourself, namely showing the website in the language you chose, and therefore does not require consent under the Swedish Electronic Communications Act (2022:482).

Embedded videos from Vimeo

The videos on the website are shown in Vimeo's player. We embed them with Vimeo's *do not track* setting, which according to Vimeo means that the player sets no cookies and does not track the visitor. When a page with a video loads, your browser still sends technical information, such as your IP address, to Vimeo so that the video can be shown.

The AI interviewer on the interview page

On the AI interview page, nothing is loaded from other services until you press *Talk to the interviewer* or the button after the information. The interviewer is then fetched from unpkg, which delivers the program code, and from ElevenLabs, which delivers the interviewer itself. The picture in the interviewer is fetched from Google Cloud Storage. Your browser then sends technical information such as your IP address to those services.

When we checked, the interviewer stored neither cookies nor anything in the browser's local storage before a conversation was started. If you start a conversation, ElevenLabs may store what is needed for the conversation to work, for example that you have read the terms. This is necessary for the service you have asked for yourself and therefore requires no consent.

What else happens technically

- The game and the calculator run entirely in your browser and fetch nothing from other services. Your answers in the game only leave the browser when you send the form at the end yourself. What you type in the calculator never leaves the browser.
- Our hosting service, Cloudflare Pages, records technical information such as IP addresses in server logs for security and operations. This happens without cookies.
- The sound in the game is created directly in the browser, and nothing is fetched from other services.
- The fonts are hosted on our own website and are not fetched from anyone else.

Sharing a page

At the bottom of every page, and on the game's final screen, there are links to share the page via LinkedIn, Facebook, X or email, and a button that copies the address. They are ordinary links: nothing is loaded from those services and nothing is sent to them until you click yourself. If you click, each service's own terms and cookie rules apply. From the game, only the game's address is shared, never your answers.

Links to other services

When you click through to Microsoft Bookings, our courses, LinkedIn, Facebook, X or ElevenLabs' own conversation page, each service's own terms and cookie rules apply. ElevenLabs' conversation page asks about cookies itself, and you can decline the ones that are not necessary.

If this changes

If we later start using cookies that are not necessary, we will ask for your consent before they are set, and this policy will be updated.

Contact

Questions are answered at hello@superintelligent.se. Read more about how we process personal data in our [privacy policy](#).

This is a translation of our Swedish cookie policy, [Cookiepolicy](#). If the versions differ, the Swedish version applies.
